

Stylized Grass with Wind Effect Shader Graph

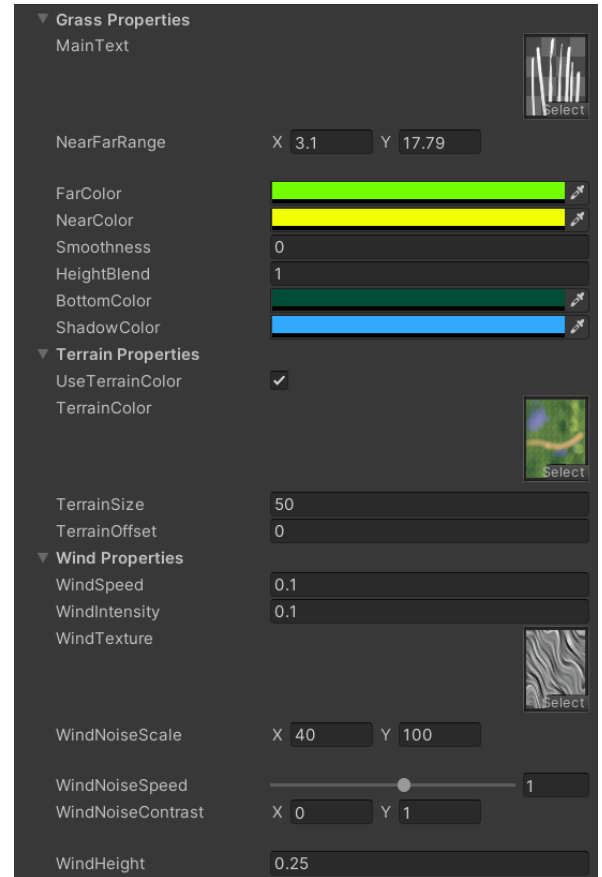

Ramez Al Tabbaa

BINARY LUNAR 2024

Stylized Grass with Wind Effect Shader Graph Properties:

This shader graph has the following properties exposed and can be adjusted easily from inspector:

- MainTexture: to control the water depth.
- Near Far Range: the range that is used to blend between near and far colors of Grass.
- Near Color: The color of grass near to camera.
- Far Color: The color of grass far from camera.
- Smoothness: the grass smoothness.
- Height Blend: how to blend between top and bottom colors of the grass.
- Use Terrain Color bool: enable/disable blending with the terrain color beneath.
- Terrain Color: reference for the render texture or the texture of the terrain.
- Terrain Size: the size of the used terrain.
- Terrain offset: allows to offset the position of the terrain color texture.
- Wind Speed: grass sway speed.
- Wind Intensity: grass sway intensity.
- Wind Texture: Select a texture that forms the waves of winds, it will bend the grass as it moves and also colorize the grass to give awesome realistic wind feeling.
- Wind Noise Scale: the scale of the wind noise texture that effects the grass.
- Wind Noise Contrast: how sharp or smooth the wind waves are.
- Wind Height: at which height the wind effects the grass.

Notes:

- This shader will work only in URP project
- To make the cutscene work you need to install Cinemachine.
